

Domain/Functional Areas

- Artificial Intelligence & Machine Learning
- Computer Science Education
- Gen AI & Agentic AI

Key Skills

Programming: Python (Pandas, NumPy), Javascript, C Language

Machine learning: Supervised Learning (Regression & Classification) , Tree-based & ensemble models (Random Forest, XGBoost) , Model evaluation, cross-validation & hyperparameter tuning

Database: SQL(Structured Query Language)

Math/Statistics: Descriptive Statistics, Inferential Statistics, Regression Analysis

Deep Learning: CNN, RNN

NLP: SPACY, NLTK, Hugging fce

Gen AI: Generative AI (LLMs), Retrieval-Augmented Generation (RAG), Fine-tuning & Model Evaluation, AI-powered Chatbot Development

Agentic AI: Agentic AI Systems, Multi-Agent Systems, Autonomous AI Workflows, AI Agent Development (LangChain, LangGraph), Agent Orchestration

Projects

Car Damage Detection - Computer Vision (CV) [Python / pandas / tensor flow / fastapi / Convolutional Neural Networks] - Developed an AI-powered car damage detection system using Python and deep learning techniques, building a CNN-based model to classify and identify vehicle damages from images. - Performed data preprocessing, augmentation, and exploratory analysis to enhance dataset quality and improve model generalization and accuracy. - Implemented advanced techniques such as Transfer Learning and hyperparameter tuning (Optuna) to optimize model performance and reduce overfitting. - Evaluated and deployed the model using a Streamlit application and FastAPI server, enabling real-time damage detection and scalable integration for practical use cases.	Jun 2026 - Jun 2026
Movie Recommendation System - Natural Language Processing (NLP) [Python / NLP / Scikit-learn / TF-IDF Vectorization / Fast API] - Developed a content-based movie recommendation system using NLP and TF-IDF vectorization. - Implemented cosine similarity to recommend movies based on textual features. - Built and deployed a REST API using FastAPI for real-time recommendations.	Jun 2026 - Jun 2026
Credit_score_prediction - Machine Learning Presentation Link [Python, Pandas, NumPy, EDA, Feature Engineering, Logistic Regression , XGBoost, Classification, Scikit-learn] - Developed an AI-powered credit score prediction system using Python and scikit-learn, building a classification model based on key financial and demographic features such as income, credit history, loan amount, and repayment behavior. - Performed data preprocessing, exploratory data analysis (EDA), and feature engineering to improve model accuracy and reliability in predicting customer creditworthiness. - Evaluated and optimized model performance using classification metrics, enabling data-driven decision-making for credit risk assessment.	Jan 2026 - Feb 2026
Health Insurance Premiums Prediction - Machine Learning Presentation Link [Python, Pandas, NumPy, EDA, Feature Engineering, Linear Regression, XGBoost, Scikit-learn] - Developed an AI-powered health insurance premium prediction system using Python and scikit-learn, applying regression models including Linear Regression and XGBoost based on customer demographics and lifestyle factors. - Performed data preprocessing, exploratory data analysis (EDA), and feature engineering to improve model accuracy and reliability of premium estimates. - Evaluated and optimized model performance using regression metrics, enabling data-driven and accurate insurance pricing predictions.	Dec 2025 - Jan 2026
Atliq Credit Card Project - Math&Statistics Project Link [Statistics, Hypothesis Testing, EDA, Probability, Python, Pandas] - Conducted statistical analysis on Atliq credit card customer data using descriptive and inferential statistics to understand spending patterns and customer behavior. - Applied hypothesis testing using Z-test to validate business assumptions and derive data-driven insights. - Performed exploratory data analysis (EDA) using Python to support strategic decision-making in the credit card domain.	Oct 2025 - Nov 2025
Hospitality domain python - Python(Pandas and Numpy) Project Link [python / pandas / numpy / matplotlib / seaborn] Developed a hospitality domain data analysis project using Python, Pandas, and NumPy to analyze hotel booking, customer behavior, and revenue data.	Jun 2025 - Jul 2025

- Performed data cleaning, exploratory data analysis (EDA), and visualizations using Matplotlib and Seaborn to identify occupancy trends and support data-driven decision-making.

Certifications

- **Python : Beginner to advanced for data profession** - Codebasics
Issued on: May 2025 [Certification Link](#)
- **Math & Statistics For AI DataScience** - Codebasics
Issued on: Nov 2025 [Certification Link](#)
- **Master Machine Learning for Data Science** - Codebasics
Issued on: Jan 2026 [Certification Link](#)
- **Deep Learning: Beginner to Advanced** - Codebasics
Issued on: Apr 2026 [Certification Link](#)

Education

Nepal Business College

Bachelor in Information Technology - Data science

Biratnagar , Naapal

Nov 2022 - May 2026
